IN THE ABSTRACT

The abstract is amended in the following in accordance with the amendment of the specification:

An anti oil leakage device for a motor shaft includes a fan frame and a fan blade wheel. The fan frame provides ~~at least~~ a motor base with a bearing seat ~~forming a projection part and an annular plate member integrally joined to~~ extending axially at the upper end thereof of the bearing seat, and the The bearing seat further has a sealing plug at the bottom thereof with an oil storage zone inside. The fan blade wheel is rotationally joined to the motor base and has ~~at least~~ a shaft ~~being pivotally mounted in~~ fitting with a bearing in the bearing seat such that ~~an untouched minimum~~ a clearance, which is small enough to break capillarity of the lubrication oil, is formed in between the annular plate member and the shaft to prevent lubrication oil in the oil storage zone from leaking out.
